AZURE DEVOPS ENVIRONMENT SETUP

AIM

To set up and access the Azure DevOps environment by creating an organization through the Azure portal.

INSTALLATION

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-us/getstarted/azureportal>. Sign in using your Microsoft account credentials.

If you don't have a Microsoft account, you can create one here: <https://signup.live.com/?lic=1>

2. Azure home page

3. Open DevOps environment in the Azure platform by typing *Azure DevOps Organizations* in the search bar.

4. Click on the ***My Azure DevOps Organization*** link and create an organization and you should be taken to the Azure DevOps Organization Home page.

RESULT

Successfully accessed the Azure DevOps environment and created a new organization through the Azure portal.

EXP NO: 2

AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT

AIM

To set up an Azure DevOps project for efficient collaboration and agile work management.

1. Create An Azure Account

The screenshot shows the 'Almost done...' step of the Azure DevOps organization setup. At the top, the Azure DevOps logo is displayed. Below it, the email address '231501175@rajalakshmi.edu.in' is shown with a 'Switch directory' link. The main heading is 'Almost done...'. A label 'Name your Azure DevOps organization *' is followed by a text input field containing 'dev.azure.com/ 2315011750774'. Below this, a label 'We'll host your projects in' is followed by a dropdown menu showing 'India'. Further down, a label 'Enter the characters you see' is followed by two radio buttons, 'New' and 'Audio', with 'New' selected. Below the radio buttons is a square image containing a blue line-art logo. At the bottom right is a blue 'Continue' button.

2. Create the First Project in Your Organization

a. After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.

b. On the organization's **Home page**, click on the **New Project** button.

c. Enter the project name, description, and visibility options:

Name: Choose a name for the project (e.g., **LMS**).

Description: Optionally, add a description to provide more context about the project.

Visibility: Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).

d. Once you've filled out the details, click **Create** to set up your first project.

The screenshot shows the 'Create a project to get started' form. It includes a 'Project name' field with 'OQS' entered, a 'Description' field, and a 'Visibility' section with 'Public' and 'Private' options. The 'Private' option is selected. Below this is a note about public projects being disabled for the organization. There is an 'Advanced' section with 'Version control' set to 'Git' and 'Work item process' set to 'Agile'. A blue '+ Create project' button is at the bottom.

Create a project to get started

Project name *

OQS

Description

Visibility

☐ Public
Anyone on the internet can view the project. Certain features like TFVC are not supported.

☒ Private
Only people you give access to will be able to view this project.

Public projects are disabled for your organization. You can turn on public visibility with [organization policies](#).

^ Advanced

Version control ?
Git

Work item process ?
Agile

+ Create project

3. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

4.Project dashboard

5.To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

RESULT

Successfully created an Azure DevOps project with user story management and agile workflow setup.

TESTING TEST PLANS AND TEST CASES

AIM

Test Plans and Test Case and write two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Test Planning and Test Case Test Case Design Procedure

1. Understand Core Features of the Application

- User Login

2. Define User Interactions

- Each test case simulates a real user behaviour (e.g., logging in, submitting quizzes, viewing results)

3. Design Happy Path Test Cases

- Focused on validating that all core functionalities work correctly under normal conditions
- Example: Player registers and logs in, submits quizzes and views results

4. Design Error Path Test Cases

- Simulate invalid inputs, system issues or failed actions to ensure proper error handling.
- Example: Login with invalid credentials, submission without attachments, unauthorized access to admin panel.

5. Break Down Steps and Expected Results

- Each test case includes a clear sequence of actions and expected results.
- Ensures both manual testers and automation tools can follow the process easily.

6. Use Clear Naming and IDs

- Test cases are uniquely identifies (e.g., TC01 – Valid Login, TC03 – Invalid Password).
- Facilities easy mapping to features and tracking in Azure DevOps.

7. Separate Test

- Grouped by functionality such as:
 - Login and Registration
 - Quizzes Submission
 - Viewing Results
 - Admin Functions
- Improves organization and enables focused execution in Azure DevOps.

8. Prioritize and Review

- High-priority assigned to critical workflows like login, quizzes and results.
- Reviewed for completeness, accuracy and alignment with user stories and features definition.

1.New test plan

The screenshot shows the 'New Test Plan' interface in Azure DevOps. The left sidebar contains a navigation menu with options: Know, Overview, Boards, Repos, Pipelines, Test Plans (selected), Test plans, Progress report, Parameters, Configurations, Runs, and Artifacts. The main content area is titled 'New Test Plan' and includes three required fields: 'Name *' with a text input containing 'Enter a plan name', 'Area Path *' with a dropdown menu showing 'Know', and 'Iteration *' with a dropdown menu showing 'Know'. At the bottom right of the form are 'Create' and 'Cancel' buttons. The top of the interface shows the breadcrumb 'Azure DevOps E-LearningPlatform-know / Know / Test Plans' and a search bar.

2. Test suite

The screenshot shows the Azure DevOps Test Plans interface. The left sidebar contains navigation options: Know, Overview, Boards, Repos, Pipelines, Test Plans, Test plans, Progress report, Parameters, Configurations, Runs, and Artifacts. The main area displays the 'Chapter-wise Course Learning Flow (2)' test suite. It shows a progress bar indicating 50% completion (May 14 - May 21) and a 'Current' status. Below the progress bar, there is a table of test points:

Title	Outcome	Order	Test Case Id	Configuration	Tester
Test Case 1: Open a course and view chapters	In Progress	1	8	Windows 10	Tarun Aanand S G
Test Case 2: Complete a chapter and mark as done	Failed	2	9	Windows 10	Tarun Aanand S G

3. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

E-Learning Platform– Test Plans

USER STORIES

- As an admin, I want to log in to manage quizzes and users (ID: 3).
- As a player, I want to register and log in so that I can access quizzes securely (ID: 4).
- As an admin, I want to give users the right access so they can use the system properly (ID: 6).
- As a player, I want to see only my quizzes and progress so that it's easy to use (ID: 7).
- As an admin, I want to create and configure quizzes with time limits so I can control quiz flow (ID: 10).

TEST SUITES

Test Suite 1: User Registration and Login

Test Case 1.1: User Registration with Valid Details

- **Action:**
 1. Navigate to the registration page
 2. Enter valid name, email, password
 3. Click "Register"
 - **Expected Result:**

User account is created, and a confirmation message is shown.
 - **Type:** Happy Path
-

Test Case 1.2: Login with Valid Credentials

- **Action:**
 1. Go to login page
 2. Enter registered email and correct password
 3. Click "Login"
 - **Expected Result:**

User is redirected to dashboard
 - **Type:** Happy Path
-

Test Case 1.3: Logout from Application

- **Action:**
 1. Click on user profile
 2. Click "Logout"
 - **Expected Result:**

User is logged out and redirected to login page
 - **Type:** Happy Path
-

Test Suite 2: Course Enrollment and Access

Test Case 2.1: View Available Courses

- **Action:**
 1. Login to the platform
 2. Navigate to "Courses" tab
 - **Expected Result:**

A list of available courses is displayed
 - **Type:** Happy Path
-

Test Case 2.2: Enroll in a Free Course

- **Action:**
 1. From course list, select a free course
 2. Click “Enroll”
 - **Expected Result:**

User is successfully enrolled in the course
 - **Type:** Happy Path
-

Test Case 2.3: Access Enrolled Course Content

- **Action:**
 1. Go to “My Courses”
 2. Click on enrolled course
 3. Play a video lecture
 - **Expected Result:**

Course content loads and plays correctly
 - **Type:** Happy Path
-

Test Suite 3: Assessment and Certification

Test Case 3.1: Start Quiz for a Completed Module

- **Action:**
 1. Complete a module
 2. Click “Take Quiz”
 - **Expected Result:**

Quiz page opens with questions related to the module
 - **Type:** Happy Path
-

Test Case 3.2: Submit Quiz Answers

- **Action:**
 1. Select answers for all questions
 2. Click “Submit”
 - **Expected Result:**

Submission is accepted and score is displayed
 - **Type:** Happy Path
-

Test Case 3.3: Download Certificate After Course Completion

- **Action:**
 1. Complete all modules and pass final quiz
 2. Click “Download Certificate”
- **Expected Result:**
Certificate is downloaded in PDF format
- **Type:** Happy Path

Test Cases

The screenshot shows the Azure DevOps Test Plans page for the project 'E-LearningPlatform-know'. The left sidebar contains navigation links: Know, Overview, Boards, Repos, Pipelines, Test Plans (selected), Test plans, Progress report, Parameters, Configurations, Runs, and Artifacts. The main area displays a table of test plans with columns: Title, Test Plan ID, State, Area Path, Iteration, and Assigned To. There are four test plans listed.

Title	Test Plan ID	State	Area Path	Iteration	Assigned To
Subject Selection Functionality	13	Active	Know	Know	231501182@rajalakshmi.edu
Role-based Access	10	Active	Know	Know	231501182@rajalakshmi.edu
Chapter-wise Course Learning Flow	6	Active	Know	Know	231501175@rajalakshmi.edu
Login verification	1	Active	Know	Know	231501175@rajalakshmi.edu

The screenshot shows the Azure DevOps Test Suite page for the test plan 'Chapter-wise Course Learning Flow (ID: 7)'. The left sidebar is the same as the previous screenshot. The main area displays a table of test points with columns: Title, Outcome, Order, Test Case Id, Configuration, and Tester. There are two test points listed.

Title	Outcome	Order	Test Case Id	Configuration	Tester
Test Case 1: Open a course and view chapters	In Progress	1	8	Windows 10	Tarun Aanand S G
Test Case 2: Complete a chapter and mark as done	Failed	2	9	Windows 10	Tarun Aanand S G

4. Installation of test

5. Running the test cases

The screenshot shows the Azure DevOps web interface for a test plan named "Subject Selection Functionality (ID: 14)". The interface is divided into a left sidebar and a main content area. The sidebar contains navigation links for "Know", "Overview", "Boards", "Repos", "Pipelines", "Test Plans", "Test plans", "Progress report", "Parameters", "Configurations", "Runs", and "Artifacts". The main content area displays the test plan details, including a "Test Suites" section with a filter "Filter suites by name" and a "Test Points (1 item)" table. The table has columns for "Title", "Outcome", "Order", "Test Case Id", "Configuration", and "Tester". A context menu is open over the first test point, showing options like "View execution history", "Mark Outcome", "Run", "Reset test to active", "Edit test case", and "Assign tester". The "Run" option is highlighted, and a sub-menu is visible with options like "Run for web application", "Run for desktop application", and "Run with options".

Test Case 1: Open a course and view chapters	
1. Login and search for a course	00:00
2. Click on a course from the result	00:00
3. Check the chapter list displayed	00:00
4. Expected Result: List of chapters is displayed in sequence	00:00

6. Recording the test case

10. Progress report

11.Changing the test template

The screenshot shows the Azure DevOps Organization Settings page for 'tarunaananad27'. The left sidebar contains navigation links for General, Security, Boards, Pipelines, and Repos. The 'Process' link under Boards is selected. The main content area is titled 'All processes' and shows a table of available process templates.

Name	Description	Team projects
Basic (default)	This template is flexible for any process and great for teams getting started with Azure DevOps.	0
Agile	This template is flexible and will work great for most teams using Agile planning methods, including those practicing Scrum.	2
Scrum	This template is for teams who follow the Scrum framework.	0
CMMI	This template is for more formal projects requiring a framework for process improvement and an auditable record of decisions.	0

The screenshot shows the Azure DevOps Organization Settings page for 'tarunaananad27', specifically the 'Agile' work item types section. The left sidebar is the same as the previous screenshot. The main content area is titled 'All processes > Agile' and shows a table of available work item types.

Name	Description
Bug	Describes a divergence between required and actual behavior, and tracks the work done to correct the defect and verify the correction.
Epic	Epics help teams effectively manage and groom their product backlog
Feature	Tracks a feature that will be released with the product
Issue	Tracks an obstacle to progress.
Task	Tracks work that needs to be done.
Test Case	Server-side data for a set of steps to be tested.
Test Plan	Tracks test activities for a specific milestone or release.
Test Suite	Tracks test activities for a specific feature, requirement, or user story.
User Story	Tracks an activity the user will be able to perform with the product

RESULT

The test plans and test cases for the user stories is created in Azure DevOps with Happy Path and Error Path.

EXP NO: 9

CI/CD PIPELINES IN AZURE

AIM

To implement a Continuous Integration and Continuous Deployment (CI/CD) pipeline in Azure DevOps for automating the build, testing, and deployment process of the E-Learning Platform, ensuring faster delivery and improved software quality.

PROCEDURE

Steps to Create and implement pipelines in Azure:

1. Sign in to Azure DevOps and Navigate to Your Project
Log in to dev.azure.com, select your organization, and open the project where your Student Management System code resides.
2. Connect a Code Repository (Azure Repos or GitHub)
Ensure your application code is stored in a Git-based repository such as Azure Repos or GitHub. This will be the source for triggering builds and deployments in your pipeline.
3. Create a New Pipeline
Go to the Pipelines section on the left panel and click “Create Pipeline”.
Choose your source (e.g., Azure Repos Git or GitHub), and then select the repository containing your project code.
4. Choose the Pipeline Configuration
You can select either the YAML-based pipeline (recommended for version control and automation) or the Classic Editor for a GUI-based setup. If using YAML, Azure DevOps will suggest a template or allow you to define your own.
5. Define Build Stage (CI - Continuous Integration) from YAML file.
6. Install dependencies (e.g., npm install, dotnet restore).

7. Build the application (dotnet build, npm run build).
8. Run unit tests (dotnet test, npm test).
9. Publish build artifacts to be used in the release stage.
10. Save and Run the Pipeline for the First Time
Save the YAML or build definition and click “Run”.
Azure will fetch the latest code and execute the defined build and test stages.
11. Configure Continuous Deployment (CD)
Navigate to the Releases tab under Pipelines and click “New Release Pipeline”. Add an Artifact (from the build stage) and create a new Stage (e.g., Development, Production).
12. Configure the CD stage with deployment tasks such as deploying to Azure App Service, running database migrations or scripts, and restarting services using the Azure App Service Deploy task linked to your subscription and app details.
13. Set Triggers and Approvals
Enable continuous deployment trigger so the release pipeline runs automatically after a successful build. For production environments, configure pre-deployment approvals to ensure manual verification before release.
14. Monitor Pipelines and Manage Logs
View all pipeline runs under the Runs section.
Check logs for build/test/deploy stages to debug any errors.
You can also integrate email alerts or Microsoft Teams notifications for build failures.
15. Review and Maintain Pipelines
Regularly update your pipeline tasks or YAML configurations as your application grows.
Ensure pipeline runs are clean and artifacts are stored securely.
Integrate quality gates and code coverage policies to maintain code quality.

README.md

React + Vite

This template provides a minimal setup to get React working in Vite with HMR and some ESLint rules.

Currently, two official plugins are available:

- [@vitejs/plugin-react](#) uses Babel for Fast Refresh

Result:

The GitHub repository clearly displays the organized project structure and consistent naming conventions, making it easy for users and contributors to understand and navigate the codebase.
